

Chapter 5- JavaJam Hands-On Practice Case

Maximilian Graves-011131806

- 1) Examine the sitemap in Figure 2.28. What type of site organization is used for the JavaJam website? Is it the most appropriate organization for the site? Why or why not?
 - a. JavaJam uses hierarchical organization. It is the most appropriate organization for the site because it has a clearly defined home page with links to major sites leading off the page.
- 2) Review the recommended web design practices this chapter. Use the Web Design Best Practices Checklist (Table 5.1) to evaluate the JavaJam site you created in earlier chapters. Cite three design practices that have been well implemented. Cite three design practices that could be implemented in a better way. How else would you improve your website?
 - a. Three design practices that have been well implemented are that it has a consistent site header/logo, a consistent navigation area, and an informative page title that includes the company/organization/site name. The site does not have many cite design practices that could be implemented in a better way though it could use the following tag to zoom the page in on mobile devices “<meta name="viewport" content="width=device-width, initial-scale=1.0">”
